Do You Ship Smart?

XLogics Shipping Center (XSC) is the modern and flexible platform which conveniently fulfills the requirements of your shipment preparation and distribution. Any needed output, e.g. shipping labels and EDI messages, is provided for logistics providers' domestic, international B2C and B2B markets. Furthermore, XSC takes care of the full end2end Tracking and Tracing of shipments based on carriers' native status events. Any status event of different destinations is consolidated in XLogics Shipping Center. It is truly a perfect customer shipping solution.

Improve Your Performance

Improve your operation, transport and delivery by XSC shipment preparations at the beginning of the logistics supply chain. Your complete performance will increase. Based on your specific needs, XSC is responsible for high quality prints of shipping labels and the transfer of the pre-advice information to operational systems of your logistics providers chosen. You will get perfectly prepared shipments. Approved EDI messages avoid

the media disruption of the communication to the logistics providers.

Check and Show Your Performance

XSC perfectly supports you with just-in-time track and trace events of your shipments. A nice and simple front-end in the internet will give you a very conveniently detailed view of a shipment status. Furthermore, XSC provides your company with standardized logistics performance reports. These reports don't tell lies and they will give you a perfect overview of the logistics provider performance. Show your performance to your customers by the integration of the track events into your web page.

Time to Market

Because of the flexible support of different interfaces, embedding XSC in your ERP or PPS environment is one of the easiest tasks. A fast time-to-market strategy is met perfectly by this concept. High-End performance, with up to 350 shipment preparations per minute, ensures success in

shipment distribution. More than 100 logistics provider modules are meeting any requirement of your business needs. The KISS-principle is always fulfilled by easy and standardized concepts of technical implementation.

Be our partner – We would like to be your partner!

X-Facts about us

Get familiar with XLogics Group.

1. Foundation

XLogics was established in 2003. A successful story in logistics and IT started, based on more than 15 years of experience in logistics and IT.

2. Our Focus

We focus mainly on organizing and optimizing logistics processes.

3. Our Strategy

Fulfilling the requirements of customers in the B2B and B2C market is our highest priority. The combination of consultancy for logistics and IT is the groundbreaking concept.

4. Our Staff

Professional skills and passion brought us to the top of this logistics niche. More than 40 employees expect your requirements.

5. Our Future

Currently XLogics Group supports customers on 4 continents and in 28 countries.

The Pan-European Network was extended to a world-wide network.

Groundbreaking developments of our logistics platforms will revolutionize the logistics market.

Add Value to your Core Business

The comprehensive logistics platform adds high value to your core business. It speeds up your processes and you do not have to take care of the logistics preparations for your items. It is state of the art. Any product portfolio use of the logistics providers is approved. More than 100 modules give your business the warranty to be up to date. You can focus on your core business. XSC supports multi-language technology should you have customers abroad.

Direct your business towards a highly professional direction.

Save your Money – Don't make, just buy!

A high level home-made solution costs hundred thousands of Euros during a 5-year development process. Many resources are bonded during the decision making process, the development and the deployment of the first version. Furthermore, the solution has to be extended and administrated.

Do you think that it will be cheaper than a buy-solution?

With XLogics Shipping Center you do not lose time. You will be up and running during a very short time period. XLogics Group takes care of further developments and keeps your system up-to-date.

Your company benefits from new requirements of thousands of customers. Any new functionality or solution will be integrated by XLogics into XSC and established as a standard in updates and upgrades.

XLogics Group offers modern and flexible terms for a co-operation. Contact us and be surprised. We will offer you the perfect business model.

Accelerate your Processes

Up to 350 shipment preparations speed up your operation extensively. A mixture of more than 100 different logistics provider modules perfectly supports the needs of the B2B and B2C business and the requirements of your customers.

XLogics Shipping Center can highly be integrated into your ERP- or PPS-Systems. Our philosophy for the integration is based on the idea to focus on your business workflows in the first step. Low requirements regarding the hardware and software environment, offer you an easy and fast deployment of the application.

Changing technical needs and configurations of the standardized interfaces can be done on the fly by the Shipping Management Studio (SMS). The Shipping Management Studio is the management tool for each configuration of the XSC platform.

XLogics provides you with different trainings and education for the administration of XSC. If you want to give the responsibility for the deployment of XSC in our hands, our professionals provide you with competent support.

Technical Overview - Simple Implementation

XLogics Shipping Center is based on the modern platform of Microsoft.Net. C# source codes, developed by our software engineers give the platform the stability which is needed in your critical operation. Synchron and asynchron software processes are supported by the Internet Information Server of Windows.

Industrial environments require stable databases. XSC will be delivered with MS

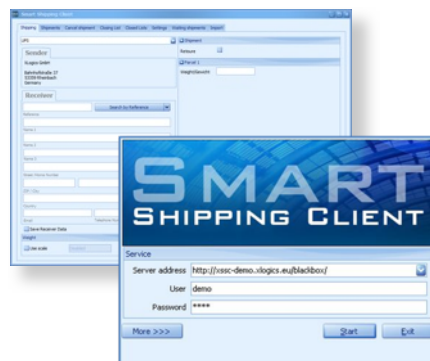

SQL Express database and supports of course MS SQL Server database and Oracle databases.

The Smart Shipping Client (SSC) which can be used for different manual and semi-manual logistics workflows, is a real Thin Client. You can run the exe-file on a simple workstation. SSC supports the connection of label printers, scales and hand scanners.

Because of the server-based technology any configuration of this Smart Shipping Client will be updated based on the settings of the server. Of course user based setting and a powerful user-management allow flexible setups.

Standardized ASP solutions and individual SaaS solutions avoid the setup of an In-house solution. The complete administration of the solution is in professional hands of XLogics. The platform runs on high-end Dell servers in our server farm in Germany. High-end availability ensures your daily business.

Generally you can connect your environment to our platform based on XML Web Service interfaces of other types directly. Furthermore different types of formats can be connected to the Smart Shipping Client.

Components

XLogics Shipping Center consists of helpful components like:

1. Smart Shipping Client

SSC is the helpful logistics front-end for manual or semi-manual processes in your warehouse. SSC is not a client software. It is a real Smart Client.

2. Business Extender

Business Extender helps you to connect your existing interfaces easily to XSC. Furthermore the interpretation of parameters and conditions is covered by this powerful tool.

3. Guard Service

Guard Service automates file transfer processes. ERP order file will be pushed by Guard Service to XSC main components. EDI message transfers are also in the responsibility of Guard Service.

4. Form Designer

The Form Designer gives you perfectly flexibility for the design of your standard shipping labels or the creation of forms with invoice and return information.

5. XMail Notifier

Send information about your shipment preparation status to your customers with XMail Notifier by e-mail.

6. Hardware Manager

Hardware Manager controls conveyers, applicators, scales and sorter in your operation. Connect any hardware with this powerful tool.

Software Requirements - Our advice

Server

Windows Server OS 2008
MS.Net Framework 3.5 or higher
MS-SQL Server DB 2008 or higher
Oracle DB 11g or higher

Workstation

Windows 7
MS.Net Framework 3.5 or higher

We don't squeeze you dry!

Find Your Business Model - Contact the Team

Volume License Model

XLogics Group is always oriented on customers' requirements and needs. We provide our solutions to any customer segment. Independent on your daily shipment preparations we will provide you with the best choice. Of course we offer the maintenance agreement for the different business models.

The daily shipment label amount is one important factor for our calculation. Furthermore we find our fair pricing depending on the range of components, logistics provider modules and services rendered. The price of the Volume License for the main components XPack Black Box and XTrace depends on your daily label amounts which are measured by XLogics. The Volume License can only be offered for In-house versions.

Any further detail regarding your individual quotation will be provided by XLogics' staff personally.

Prepaid-Shipping Service

The Prepaid-Shipping Service is a development of XLogics Group. This business model is only provided by us worldwide.

Depending on your daily label preparations we provide you with our quotation as a „pay per use“ option. The most interesting part of this business model is that you can select any main component, component and logistics provider module of a huge list which

will be extended by XLogics Group extensively each year.

This unique business model for the Prepaid Shipping Service can be offered by XLogics for an In-house version, an ASP version and a SaaS version.

The Enterprise Business

Also this business model is an unique development of XLogics Group.

The target group are truly major prospects with high shipment amounts per year. You can select any main component, component, logistics provider module for your operations worldwide independently on the amount of applications. Additionally XLogics provides you with a high range of services, support and software engineering for further developments and individualisation of your XLogics Shipping Center platform.

This business model can only be provided for high-end In-house versions of XSC.

Contact our Team

Did you find an interesting business model for your needs?

Do you think that XLogics Shipping Center is the best choice in the logistics market?

Could we attract you?

Our Team is at your disposal. Contact us and we will provide you with our professional skills and an individual custom quotation. Take the time for a short telephone call with us and we will find the best logistics solution with you together.

Each pricing and setup is transparent and you can count on us for a long-lasting co-operation.

Increase your business and grow with us.

Sincerely Your XLogics Team
